

VORTON

# Who We Are

Vorton Studios is a boutique visual effects studio specialising in cinematic VFX, CGI and colour grading for short-form storytelling. We work across commercials, music videos and narrative projects where visual quality, realism and emotional tone matter.

Our approach combines technical precision with a strong sense of visual taste, ensuring every frame feels intentional, grounded and cohesive rather than over-processed or artificial.

We collaborate closely with agencies, producers and directors as a reliable post-production partner, integrating seamlessly into existing workflows while maintaining a high standard of craft.

# What We Do

## VFX & CGI

We design and execute visual effects that integrate naturally into live-action footage. From invisible fixes to full CGI elements, our focus is realism, believability and storytelling clarity.

- Set extensions & environment builds
- CGI objects & product visuals
- Clean-ups, removals & compositing
- Shot enhancement & integration

## Colour Grading

Colour is treated as a storytelling tool, not a filter. We focus on contrast, texture and tone, delivering cinematic grades that preserve detail and emotion.

- Film emulation & look development
- Commercial & music video grading
- Shot-matching & consistency
- Final delivery across platforms

## Integrated Finishing

When VFX and colour are handled together, the result is more cohesive and efficient. Our integrated workflow ensures consistency from first comp to final master.

VFT

### **Vorton Film Technology (VFT)**

Our internal pipeline, **Vorton Film Technology**, ensures consistent visual quality across VFX and colour. By treating CG, compositing and grading as a unified process, we maintain a filmic finish where effects feel embedded, not layered on top.

# Scoping & Clarity

## How we scope projects?

Every shot is evaluated based on complexity, movement and realism requirements. This allows us to plan accurately and communicate clearly from the start.

### Key factors we assess:

- Camera and object movement
- Level of interaction with live footage
- Realism and detail required
- Integration with colour and lighting

This approach helps avoid over-engineering simple shots, and ensures complex work receives the time and care it needs.

**Result:** better planning, smoother production, stronger visuals.

**Our Works**

# No Silence

No Silence represents the power of our custom-built production pipeline. Faster, sharper, and designed to scale without creative compromise. Every frame reflects control, speed, and premium craftsmanship. This is how modern visual storytelling is built.

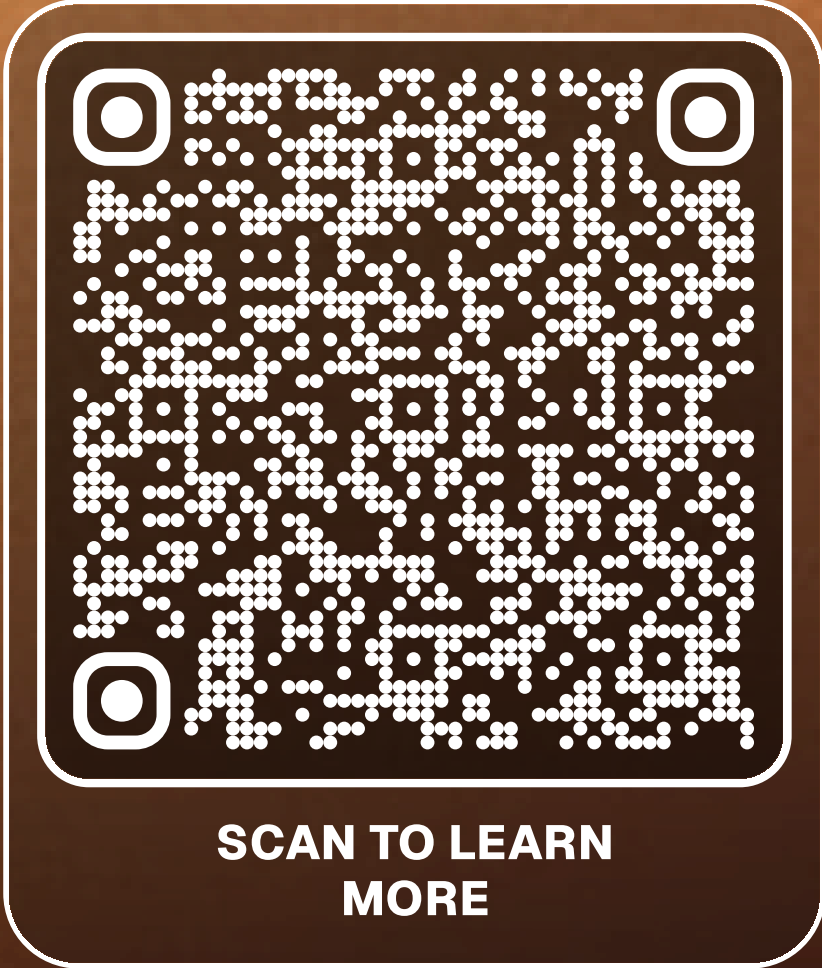

Our Works

# Zeal

Zeal was never just about producing another render. It was about proving that product visualization can transcend catalogues and ads to become cinema in its own right. When light and motion are treated as storytelling devices, even a chair can become legend.

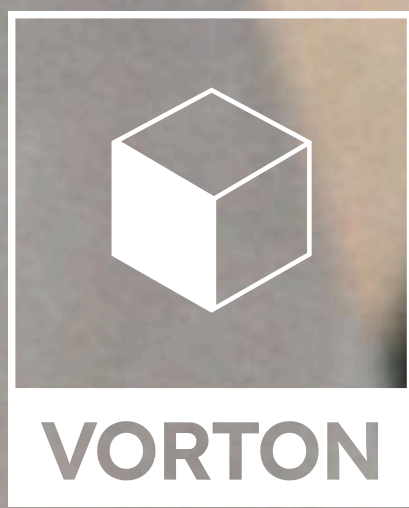

Our Works

# Maniratna

With Maniratna, risk was not flamboyance but fidelity, fidelity to feeling, to material truth, and to that tender place where craft meets memory. Translating jewellery to film was not a technical exercise alone; it was an act of translation: turning weight into presence, detail into story.

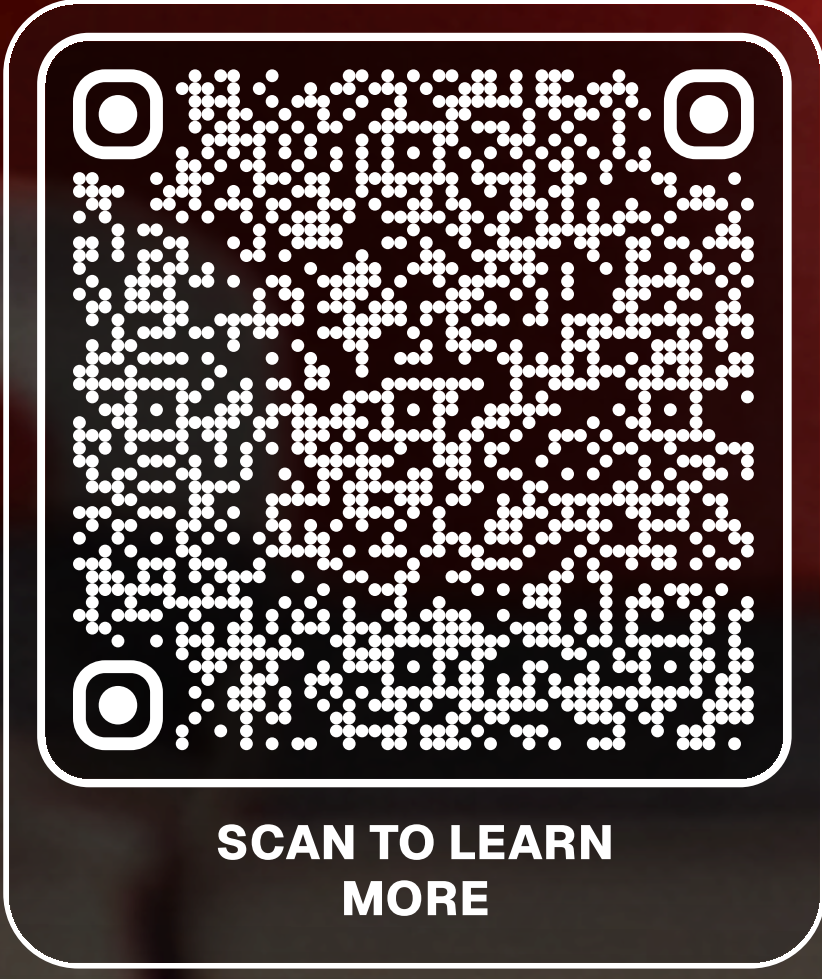

Our Works

# Sienna

Sienna revives Kodak 5247's honest warmth, restoring daylight's cinematic soul through precise film science, making digital images not only accurate but emotionally resonant, alive with the subtle glow and human truth film always carried, effortlessly beautiful.

Our Works

# Lumen

Lumen restores Kodak 500T's romantic evening soul, transforming tungsten light into atmosphere through exact film science, giving digital shadows warmth, depth, and emotion, bringing back the velvety darkness and glowing highlights that once defined true cinematic moments.

# Why Vorton

## What clients value?

- Boutique attention with studio-level quality
- Clear communication and realistic planning
- Strong aesthetic sense, not just technical execution
- Reliable delivery without unnecessary complexity

We take on projects where craft, trust and visual integrity are priorities, and where our work genuinely adds value to the final piece.
